

ZEOLITE:

Cellular Zeolite and powdered Zeolite are readily available overseas (cellular is about USD200 for three small bottles) this about a weeks supply for someone trying to king hit cancer.

I am trying to find a more economical supply.

This mineral may turn out to be one of the most powerful cancer cell killers. Zeolite a remarkable volcanic mineral that has proven to be highly effective at destroying cancer cells. In fact, results have been so impressive, anyone fighting cancer or wishing to prevent cancer should be using zeolite. It comes in two forms....

Cellular Zeolite, a liquid zeolite, and Zeolite, a powdered micronized zeolite. They work on a couple of the basic issues in cancer. They are powerful detoxifiers and **improve the alkalinity of your body**. We list them as a cancer killer because of their ability to activate the P21 gene which tells a cancer cell to die, and because they can literally destroy the nucleus of cancerous cells.

In a 14 month study the liquid Cellular Zeolite proved itself to be a remarkable cancer fighter.

65 people with mostly stage 4 cancers, who had a prognosis of about 2 months to live, were given this type of liquid zeolite. At the end of the study, 51 people were cancer free and six more were alive, but still fighting cancer. This is a 78% cure rate for terminal cancer, an incredible 89% survival rate.

This study was actually similar to what happens in the real world. There was no control as to what drugs people were taking, or what other protocols they were on. Every person in the study basically answered an ad in a newspaper that said, "If your doctor has given up on you, come to us." So there were mostly people who had completely end-stage cancer, whose doctors had sent them home to get their affairs in order.

Out of 65 patients, eight died during the 14-month study, 51 are clinically in remission, and the six remaining patients at the end of 14 months were undergoing chemotherapy, radiation, or some other treatment along with continuing to use the zeolite. Throughout the study, many patients used some sort of adjunctive treatment. For example, a lung cancer patient was told to go home and get his affairs in order. After three months on Cellular Zeolite, he was feeling much better. He went back to his oncologist, who suggested that he was strong enough to undergo more chemotherapy and radiation. So he stayed on the Cellular Zeolite, but he also went on chemo and radiation at that point.

Not bad for a bunch of folks sent home to die.

Cellular Zeolite - The Liquid, Activated Zeolite

Testimonies have also been impressive. A female biophysicist had a state of the art, highly sophisticated GDV analyser that measures and analyses the energies in the human body. With lumps and pain in her breasts, her GDV's cancer readings were sky high. Three weeks after starting on the Cellular Zeolite, taking it at the suggested therapeutic level, her lumps were gone, as was the pain. And the GDV machine showed there was no cancer in her body.

Bladder cancer testimony:

"Last January (2005) my father-in-law had another surgery for bladder cancer. In this, and the previous surgeries, tumours were found and treated. Since last January he has worn a catheter bag to collect his urine. A few months ago his catheter bag began to have blood in it. He continued to pass more and more blood, accompanied by a foul odour.

"After testing his urine and blood, his doctor told him the cancer was back. The doctor explained that radiation treatments would likely follow the surgery, and maybe chemotherapy after that. Surgery was scheduled for Friday Sept. 2nd.

"On Saturday Aug. 20th we got some Cellular Zeolite to him. In FOUR DAYS the bleeding STOPPED and the catheter bag remained clear of any blood. After a week on it, he woke one morning and his catheter bag was full of a sticky ugly gunk, and had a terrible odour. The catheter bags and tubes could not be cleaned, and had to be discarded and replaced. From that point on there has been NO blood or odour in his catheter bag.

"Friday, September 2nd, Carl underwent surgery. His doctor was surprised to find NO Tumours in his bladder! He said he was just sure there would be tumours there. Carl has also experienced an increase in energy since taking the Cellular Zeolite." Ron W.

Another man had testicular cancer with three tumours confirmed by CAT scan. He was scheduled for surgery in 2 weeks. He started using Cellular Zeolite a few days later. When he went in for surgery, on checking for exact tumour locations by CAT scan - nothing was found.

A big turn around in only a couple of weeks, though most people take longer to see results, and thus it makes sense to add on the powdered Zeolite because more zeolite works better or faster.

There are just small amounts of zeolite in Cellular Zeolite, 24 mgs for every 3 drops. The key to why Cellular Zeolite works so powerfully is that it is a micronized, activated formulation.

Zeolite is a negatively charged volcanic mineral that naturally attracts positively charged toxins to it, and traps them in its cage-like structure. When zeolite is dug out of the ground, it will often have heavy metals bound up with it because it has an affinity to heavy metals. In making Cellular Zeolite, the zeolite is heated and cooled in a four day process to purify it of all toxins, and to give it a small amount of calcium, potassium and magnesium for ionic exchange.

In addition, Cellular Zeolite's heating and cleaning process makes a smaller molecular size zeolite that enables it to better travel throughout the body. Studies show that when you take measured quantity of Cellular Zeolite, 40% shows up in the stools -- meaning it works in the intestinal tract -- and 60% is found in the urine, meaning it gets into the bloodstream and works on cancer throughout the body.

Zeolite's ionic charge turns slightly positive when it is full of the positively charged toxins it has captured. Normal cells have a neutral charge while cancer cells have a slightly negative electrical charge. So the

now slightly positively charged zeolite molecule is attracted to cancer cells. Once inside the cancer cells, it does a couple of things that kill the cancer cells.

Zeolite activates the p21 gene. The function of the p21 gene is to tell the cancer cell to die. P21 acts as a tumour suppressor as it controls cell cycle progression. The activation of P21 appears to halt the growth of tumours by directly suppressing growth signals. In in-vitro studies, all cancer cells tested were destroyed in 72 hour. **There are no side effects because it specifically targets cancer cells as it is not attracted to normal healthy cells.**

According to the patent, once it is pulled inside the cell, the tri metallic part of the zeolite molecule can destroy the nucleus and cytoplasmic organelles. In some cases the cancer cells were destroyed in an outward burst of the cytoplasm by increased osmotic pressure. In other cases cells were totally destroyed by cell wall and membrane collapse after the nucleus is destroyed. Most often, after the nucleus and the cytoplasm are destroyed, the entire cellular contents dissipate into the surrounding environment. The membrane of these now dead cancer cells remain intact, but no cellular structures are left.

The research shows that Cellular Zeolite works on the receptor sites, cell wall membrane proteins, and surface chemistry of the cancer cell only. It does not effect ordinary, healthy cells.

This process works amazingly well in real life. Cellular Zeolite produces remarkable results.

" a friend in MD Anderson Cancer Centre in Houston, Texas with Leukaemia who was coughing continuously from pneumonia... Last Thursday (September 15th) He started taking 15 drops three times a day of Cellular Zeolite. The first day he completely stopped coughing. The Doctor said do not stop the drops. He left the Hospital today (Saturday September 17th) in Remission, and is now an outpatient."
Rick

Clearing up leukaemia in three days is quite an accomplishment. Stopping pneumonia in a day isn't shabby either.

"I can't thank you enough. I went into this Christmas thinking it would be the worst ever, but because of you I have had the best Christmas I could have ever wished for. Thank you.

"My father went for his monthly check up on Friday 23rd December 05. The doctor greeted him with a smile on his face from ear to ear. He told my father and mother to sit down because he had some good news. He said that the cancer had receded at a remarkable rate. He just could not believe it. He said that he should not worry anymore and if things went on like this then he would make a full recovery. The Doctor kept using the word remarkable!!! My father has only been taking the cellular zeolite for two weeks and the results are just a miracle.

"Thank you, thank you, thank you."

Glenn

Keiko is a female, age 72.

"At the end of Oct 2004 (11 months ago) Keiko was diagnosed in Japan with class 3 cervical cancer. At the recommendation of her doctors she underwent 28 rounds of radiation therapy. At the end of those

treatments her doctors told her they had eradicated the cancer in her cervix. Keiko's daughter, Felice, had a recommendation from her doctors here in Hawaii that Keiko should really have a PET scan in Japan to check and make sure it hadn't spread anywhere else. It had indeed metastasized to every lymph node in her body.

Felice brought her mom to Hawaii in June of this year and the oncologists here said this was an extremely aggressive form of cancer. A CAT scan showed two more spots (on her lung and on her stomach) in addition to everything else. They would try 8 rounds of chemo therapy to put off what seemed imminent – but the prognosis was grim, they didn't expect her to live even a year.

But Keiko is a fighter. And her daughter was absolutely determined. So they walked this road with faith in the power of prayer. By the 5th round of chemo therapy Keiko was so sick (nausea, vomiting and diarrhoea) they decided to stop – that was three weeks ago. Instead they kept praying and kept using the natural supplements.

5 weeks ago a friend told Felice and her mom about Cellular Zeolite. Keiko took it for a week before she had to stop to accommodate the 5th round of her chemo schedule. This time she got so sick from the chemo she and her daughter decided to stop the treatment right in the middle of the round (3 weeks ago) and they continued with the Cellular Zeolite 15 drops 3X day starting the next day.

“Three weeks later (Monday this week) Keiko had a follow up contrast dye CAT scan: When they walked in to her doctor's office, he asked how she was feeling and what she'd been eating, and had a sort of perplexed look on his face. They didn't know what to expect, but hoped and prayed there would be some positive news. Keiko didn't just have a report that was good, it was beyond all expectations -- the doctor told Keiko and Felice there was not one single sign of cancer anywhere in her body. Not in any of the lymph nodes, not on her lung or stomach. Stunned, Keiko's daughter even asked the Doc, “Are you sure? Who actually read the CAT scan?” and he reassured her it was definitely the expert, the radiologist, not just him! He was amazed too and said that less than 20% of his patients ever have such a thing happen, that even if there was great improvement they usually see some residual cancer still in the body but there was nothing here. Nothing. And the nurses were crying with emotion when they spoke with Felice and Keiko.”

Again, while these reports of very quick turnarounds are most impressive, most people do take longer. Certainly the more cancer there is in the body, the longer it may take as it will require more zeolite to kill all the cells. Taking larger amounts will increase the effectiveness and the speed at which it works for more people.

The powdered Zeolite is not as proven as the liquid zeolite. It is not as purified. Yet it has successfully got rid of cancer on its own, and you can take more of it for less money. One container of it can supply 420 grams of zeolite, while the amount in the liquid bottle is 2.4 grams. What is amazing is how the liquid zeolite does so much with so little zeolite per drop. So taking large amounts of zeolite powder along with the liquid makes sense as you get the best of both world, high quality in the liquid Cellular Zeolite and large quantity with the powdered "Zeolite".

Zeolite fights cancer in other ways. It chelates and removes heavy metals, pesticides, herbicides, and other toxins from your body. It does this in a hierarchical manner. It is most attracted to lead, mercury,

cadmium, arsenic and other heavy metals. Then chelates out pesticides, herbicides, plastics, and so forth. It also acts as a natural trap of viral particles which stops production of the viruses.

Because it traps toxins in its molecular structure, it detoxifies without overloading the detoxification system in your body. Because toxins are an underlying cause of almost all cancers, taking zeolite on a regular basis is an excellent cancer preventative. Especially as it can kill any cancer cells that may develop.

In addition it traps free radicals in its molecular structure so it acts as a free radical scavenger too. It will also help to normalize body pH levels. And helps to boost the immune system as it increases levels of CD4 immune system molecules.

There are some people who claim zeolite is neither safe or effective. As you will see, they are misguided and somewhat confused. To look at it simply, there is no question that zeolite is remarkably effective against cancer. This particular type of zeolite has been used for years by humans for diarrhoea so it has a history of safety and use behind it. So safe, it is on the Generally Listed As Safe list of the FDA. So what's the problem? Maybe like doctors, some nutritionists don't like something new that interferes with their program. But let's get into some details to relieve your mind.

If you get scared off by bad information, and don't use zeolite in fighting your cancer, you are missing out on a remarkable anti-cancer agent.

One site writes, "Mineral crystals - both fibrous and non-fibrous - have a long history of causing disease. For instance, silica crystals - ordinary fine sand - cause lung cancer and a fast-acting deadly lung disease called silicosis that kills cement workers and miners." The type of zeolite used in these products does not cause this problem, as he well knows. In addition, you are not breathing it in, which you have to do to get these types of lung conditions.

He then writes that there is "electron microscope data indicating that the crystals of this product have sharp edges." and that a principal of the company "states that these crystals enter the bloodstream (presumably through the small intestine), cells, and intercellular spaces, and that they are highly reactive." Again, studies quoted below and a history of use by humans and animals show no safety concerns, no matter what type edges it has. And it is highly reactive, but only to attracting heavy metals and other toxins to it, because of it's ionic charge. Not to biochemical interactions as he implies in the questions below.

This particular form of zeolite used in both the liquid and powdered version we recommend, clinoptilolite, has been labelled 100% safe and non-toxic by the FDA. Just like with mushrooms, many types of zeolite are harmful, some aren't. There are more than 100 different zeolites. As an example, asbestos is a zeolite and causes cancer when inhaled as a fine powder. The zeolites we are talking about have been proven to be safe. They are a naturally-occurring non-fibrous clinoptilolite zeolite and is considered to be extremely safe and entirely non-toxic (even when inhaled).

A study published in 1993 concluded that "clinoptilolite type zeolite had no carcinogenic activity." (Tatrai E, Ungvary G. Study carcinogenicity of clinoptilolite type zeolite in Wistar rats. Pol J Occup Med Environ Health. 1993;6(1):27-34.)

Another study noted that the absence in this zeolite "of fibrous particles capable of producing hydroxyl radicals makes this zeolite sample non-toxic and no carcinogenic, at least when applied orally." (Pavelic K, et al Natural zeolite clinoptilolite: new adjuvant in anticancer therapy. J Mol Med. 2001;78(12):708-20.) Additionally, detractors suggest that there are no long-term animal or human toxicity studies. This is also incorrect. This type of zeolite has been used in water filtration, air purification, plant fertilizers and animal feed for more than thirty years in the United States. Hundreds of published studies and articles outline its uses and benefits in humans and animals. A Med line search for "clinoptilolite" has no fewer than 140 articles on the uses of zeolite: removing heavy metals, improving the health of animals, treating viral disorders, removing fungal toxins, remediation of soil and treating cancer. In fact, there has been extensive testing done on this type of zeolite for use as an anti-diarrhoea drug for humans.

They claim that the aluminium that makes up the structure of the zeolite molecule is a danger. Again, they get it wrong. The zeolite molecule is composed of silica and aluminium oxides, one AlO_4 four SiO_4 molecules. It is a crystal with a pyramid structure (tetrahedral) with the small $Al-O_4$ in the centre of the four Silica molecules. The aluminium is trapped by the silica in this virtually indestructible particle. The aluminium is NEVER bioavailable.

Another website claims that research shows that zeolite is virtually insoluble in the body, and that if it did get into the body it would be the "scientific marvel of the year." Perhaps this writer ignored or was not aware of the research with the liquid zeolite showing that 60% of it was excreted through the kidneys - a clear indication that 60% of it was getting into the bloodstream. Another clear indication that even the micronized powder gets into the rest of the body is the fact that it has been sold for several years in the USA for hangovers as it rapidly detoxifies the toxins alcohol produces in the body. Rapid results with autistic children also indicate that it is even working in the brain.

Then the article goes on to criticize the research that went into the patent. Calls the stage 4 cancer study with the 78% cure rate one of the "coincidental anomalies". And claims that it couldn't really have happened with the way medical research is conducted. (This wasn't a standard medical study.) Finally says that who knows if the people in the study really had 6 weeks to live. I agree with the writer entirely on this. It's got to be just a rough estimate. But does it really matter to you if it were 6 weeks or 3 months. They answered an ad asking for people the doctors had given up on. And the liquid zeolite proved to be very beneficial to them.

Anecdotal evidence supports the ability of zeolite to pull heavy metals from the body. Three children in one family had over a 60% decrease in their elevated heavy metal levels in just 3 weeks of taking 6 to 8 drops of the Cellular Zeolite 3 times a day, based on a before and after immune assay of saliva and urine. Children with autism have experience improvements within days of taking as little as a drop a day of the liquid zeolite - a clear indication that heavy metals and other toxins are being pulled from their brains.

There are claims that the clinoptilolite zeolite to be indiscriminate in what it adsorbs - that it will absorb nutrients. This too is incorrect. Dozens of published studies outline the reactivity series of zeolite, (what it absorbs) how it has preference for the heavier metals and larger compounds that carry a positive charge. The reactivity series starts with mercury (Hg). It is: Hg, Pb, Sn, Cd, As, Al, Sb, Fe, Ni and so on. Smaller compounds may go into the zeolite, but will not be trapped. In fact, several animal studies show that

adding clinoptilolite zeolite to animal feed actually increases overall nutritional health of the animal rather than making it worse.

Cellular Zeolite is more activated and can capture more toxins than micronized zeolite powders. They are both micronized, but made smaller in different ways. The powdered zeolite is mechanically ground smaller. The heavy metals that the zeolite captures are still in it. So its molecular structure is partially full already, and it can't detoxify as well as the completely empty cage like molecular structure of Cellular Zeolite.

With Cellular Zeolite, the zeolite undergoes a several day process of high heat, an acid bath, and then slow cooling, to completely rid it of heavy metals and toxins - so that it will absorb 9 to 20 times more toxins in each molecule than the powdered zeolite. This process also gets the zeolite in a smaller molecular size so that it may do a better job of getting into the bloodstream and into cancer cells.

Clearly, zeolite is a remarkable product for cancer. **It's non-toxic, a great detoxifier, helps to improve pH levels, and the liquid Cellular Zeolite has that amazing 78% cure rate for advanced cancers.** If the drug companies had drugs that would come anywhere close to this in effectiveness, they'd have every doctor prescribing them for cancer. There's no reason not take this powerful cancer fighter. It has been successfully used with chemotherapy and radiation.

(If your chemotherapy used platinum or lithium, you would want to stop taking it 3 days before treatments and wait at least 3 days after the chemo was given. Consult your oncologist on any medical question.)

Of course, it must be taken in large enough quantities to make a difference. Four to eight bottles a month has been the usual amount used. That's 15 drops taken 3 to 5 times a day.

But it may be advantageous to do more....

A vet had some superb results giving a 9 pound cat 15 drops 3 times a day. Enough for a 200 pound man. This is a huge amount for the size of the cat. Another cat owner had been giving her cat a more normal therapeutic amount, for a cat, of 3 drops 3 times a day. She had not seen any quick results. She increased her cat's dosage to 15 drops 3 times a day. Within a few days the cat was doing much better. Clearly, there is an increase in effectiveness as the number of drops increases. In fact, some people who wish to maximize their chances of success, are now taking 60 drops 4 times a day. Unfortunately, that quantity would translate into using around 24 bottles a month. Not cheap.

Because more does better, and faster, using high quantities of the not quite as potent, but much less expensive, powdered Zeolite in addition to the Cellular Zeolite, makes sense.

It has been using successfully to fight cancer by several doctors, so it does work. Even on its own. One 420 gram container provides a month's supply at the therapeutic amount being used by them. Take the normal therapeutic range of the liquid Cellular Zeolite and add on a bottle of the powdered to maximize results. The liquid may get to places in the body the powdered stuff won't. By adding on this zeolite powder used by doctors, called simply enough Zeolite, you will be able to fight the cancer that much harder because it contains so much more zeolite than you get in the liquid form.

With its 78% cure rate, it makes sense to use the liquid Cellular Zeolite at therapeutic levels. And even more sense to add on the powdered Zeolite to hit the cancer harder still. For a tight budget, just get the powdered Zeolite where you get a therapeutic amount for a month with just one container.

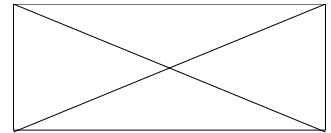

Of course, even as good as zeolite is proving itself to be, 12% of those cancer patients in the study died. That's why it makes sense to fight cancer by dealing with as many of the underlying causes of cancer as possible. So let's take a look at another effective cancer fighting strategy, increasing oxygenation of the body.

Newly Released August 2005: The Most Unique Health Supplement That Can Lead To A Longer and Healthier Life for You and Your Family

Top 10 Reasons to Use Activated Liquid Zeolites

Many thousands of people are using a liquid form of activated zeolite every day for various reasons including the following:

1. It has been shown to safely and effectively **remove toxic heavy metals** such as mercury, cadmium, arsenic and lead from the human body.
2. Research has shown that zeolites may have an **antiviral** effect because it tends to trap viral particles within its porous cell structure and remove them from the body before a process known as "viral assembly" can take place.
3. Many people take activated zeolite as a safe, **natural preventative**, to **lower their risk of cold and flu infections.**
4. They have also been shown to help **balance pH levels** in the body which creates a healthy environment where viruses and bacteria are unlikely to live.
5. Activated liquid zeolite has the ability to trap excess protons in the digestive tract, helping to **lower the risk of acid reflux.**
6. Activated zeolites have also been shown to **improve nutrient absorption** in the digestive tract allowing for better results from other supplements you may be taking.
7. Many people use activated zeolite because of their effect on the immune system. They tend to **support a healthy immune system** by removing toxins and chemicals from the body that block the

body from performing correctly.

8. Activated zeolite tends to **trap allergens** from the blood stream and digestive tract before the body can react to them, thus **reducing symptoms from various food and environmental allergies**.
9. Because of its absorptive effects in the digestive system, activated zeolite has the tendency to **stop diarrhea**.
10. It has also been found that liquid zeolite provides amazing results in the **treatment of many life-threatening and debilitating diseases**.

1. What is Liquid Zeolite ?

Liquid Zeolite is a 100% natural liquid supplement formulated using patented ZEOLITE ECHNOLOGY.

Zeolites are natural volcanic minerals with a unique, complex crystalline structure that acts like a cage, working at the cellular level against heavy metals and harmful toxins. In fact, because it is one of the few negatively charged minerals in nature, Zeolites act as magnets drawing toxins to it, capturing them in its cage and removing them from the body. This unique ability to remove dangerous toxins is very well documented in different countries. Liquid Zeolite has been shown to have the following functions:

- Acts to reduce health risks.*
- Acts as a potent antioxidant.*
- Aids in balancing bodily pH levels.*
- Acts to chelate and remove, allergens, heavy metals and other carcinogens from the body.*
- Reduces the incidence of diarrhea.*
- Improves nutrient absorption in the digestive tract.*
- Acts to balance digestive pH, thus reducing acid reflux.*
- Acts to stabilize immune system function.* (immunomodulatory).*

2. Who formulated Liquid Zeolite and how long did it take?

It has taken Dr. Harvey Kaufman 14 years of research to formulate Liquid Zeolite.

3. Is it a drug?

No. Dr. Harvey Kaufman originally planned on moving forward with the FDA (USA Food and Drug Administration) drug-approval process. However, an extremely expensive and time-consuming process of bringing a new drug to market proved to be a daunting challenge. He then introduced Liquid Zeolite to the chairman of our company's Scientific Advisory Board, Rik Deitsch. Recognizing the product to be

safe, 100% natural and non toxic, Deitsch knew it could be brought to market much faster and at a much lower cost as a "nutritional supplement."

4. Why is the patent labelled Epithelial Cell Cancer Drug if the product is 100% Natural?

The application was submitted to the U.S. Patent and Trademark Office for patent consideration under the title "Epithelial Cell Cancer Drug". The governmental office adopted this submitted name as the patent title. The term "Drug" is the legal term given to a product (whether natural or not) approved by the FDA. Products approved by the FDA are allowed to make specific product claims.

Liquid Zeolite was originally poised to pursue drug approval. As mentioned above, that decision has been reversed and Liquid Zeolite is marketed as "dietary supplement" for the benefits listed above. The title of the patent remains as originally submitted, but because Liquid Zeolite is not a FDA "approved drug," we cannot legally make claims that it cures, treats or prevents any disease.

5. What are Epithelial Cells?

Epithelial cells are skin tissues that cover and line the body. They cover all the body's organs (throat, lung, heart, breast, prostate, kidneys, liver, ovaries and colon) and line the body's cavities (including the inside of the chest and abdominal cavity).

6. Does Liquid Zeolite cure cancer?

Liquid Zeolite is not approved as a "drug" and this claim cannot be made.

7. I noticed the company has the patent number 6,288,045. I want to read the patent filing on "Epithelial cell cancer drug ", how do I do that?

The Federal government shows filed patent information at the trademark and patent website (www.uspto.gov). You can also [download a summary here](#), or [download the full complete whitepaper here](#).

8. What is the proper answer when people ask about curing cancer?

Sorry, I cannot make this claim. [Please read the patent](#). It's up to you to decide to take the product for that reason. However, Liquid Zeolite should be taken, regardless, by anyone for all the other benefits mentioned above and the reasons mentioned below.

9. What side effects does Liquid Zeolite have?

Most detoxification regimens cause some sort of side effects, mainly flu-like symptoms. Liquid Zeolite's cage-like structure works so efficiently trapping the toxins and heavy metals that no side-effects are felt. Instead, you may experience an overall feeling of well being.

10. What interactions does it have with other medications, if any?

If you are taking medications always consult your doctor before adding any supplements to your regimen. In the special case of chemotherapy, Liquid Zeolite is so effective in removing the toxins from the body and since chemotherapy uses toxic chemicals to poison the cancer, please consult your doctor before adding it to your regimen as a supplement.

Click Here to ORDER

11. Why is detoxification of my body important?

The average person is exposed to more toxins through water and air pollution, household cleaning supplies, pesticides, disinfectants, and food additives than ever before in human history. Thus, this leads to increasingly weakened immune systems.

12. How do I take liquid zeolites?

The bottle is not much bigger than a small eye dropper bottle - and works in a similar way. It has a clear, tasteless liquid that enables you take a very small quantity of drops daily.

13. How many drops should I take if I want to do a general detoxification of my body?

10 drops, 3 times a day, for 10 days.

14. How many drops should I take for general maintenance of good health?

3 drops, 3 times a day, everyday.

15. What kind of toxic chemicals are found in humans?

PCB's, Dioxins, Phthalates, DDT and Furans. According to the 2005 report from the CDC's Environmental Health Laboratory, there are currently 148 chemicals currently found in the blood and/or urine of many people.

16. What does it mean that Liquid Zeolite is a pH balancer?

The Zeolite in Liquid Zeolite is a negatively charged molecule and has a cage-like structure that is able to "trap" H⁺ ions, which lower the pH or make it more acidic. Therefore, by "trapping" these positively charged hydronium ions, Liquid Zeolite helps balance the pH to a more neutral and alkaline level.

17. Why is it important to maintain proper pH balance?

The optimum pH of your body should be slightly alkaline around 7.4. Bacteria, fungi, yeast and viruses thrive when the pH of your body is acidic. Thus acidic pH, 6.9 and below, is conducive for disease.

18. How is taking Liquid Zeolite different from just taking the powdered form of the Zeolite?

The powdered form of the Zeolite is still in its original mineral form. All minerals are in essence rocks and for the most part cannot be absorbed by the body, unless they are changed to a water soluble form or a liquid form. Liquid Zeolite's patented Zeolite is in a water soluble form, which it is able to be used by our bodies.

19. Does it work against viruses?

No claims can be made that Liquid Zeolite is effective against viruses. Please read the patent for more information on this subject.

20. Who should take Liquid Zeolite?

Everyone. A recent study done by The Environmental Working Group tested the umbilical cord blood of ten children (samples were collected by the Red Cross after the cord was cut). They found 287 industrial chemicals and pollutants in each cord, out of these 180 are known to cause cancer, 217 are toxic to the brain and nervous system and 208 cause birth defects in animals.

Similarly, Mt. Sinai School of Medicine tested the blood and urine of 9 volunteers. They found a total of 167 industrial chemicals, out of these are known to cause cancer in humans, 94 are toxic to the brain and nervous system, 72 affect lungs and breathing, 86 affect your hormones, 79 cause birth defects and/or abnormal development. Additionally, highly toxic heavy metals like lead, aluminium and mercury were found, as well as numerous herbicides and pesticides.

19. What about the Aluminium in the Zeolite, could this potentially be harmful?

No. The Zeolite molecule is virtually indestructible and will not break down in the body. In order to break down the structure, one would have to heat the molecule up to 900 degrees for several days before any breakdown would occur.

20. Will something happen to it, if I leave it in the sun inside my car?

No. Zeolite is a virtually indestructible mineral that is unaffected by the sun or the possible heat that it can produce under those conditions.

21. Does it need refrigeration after opening?

No.

22. Who manufactures Liquid Zeolite?

Our company has the exclusive right to Liquid Zeolite and it's has patented zeolite and technology. The product is manufactured exclusively for our company at a facility adhering to certified Good Manufacturing Practices (CGMP) as set forth by the Food and Drug Administration.*

23. Which countries can I order Liquid Zeolites in?

To find out how you can easily order Liquid Zeolites from USA, Canada, Japan, Hong Kong, Taiwan and Macau, please just enter your e-mail address, first & last name, phone number, best time to call and a brief message (optional), then click the "I want more info" button.

24. I am NOT based in the USA or any of those countries (for example I live in the Asia Pacific or other countries not listed above) - how do I order Liquid Zeolites?

For people outside those countries, you can [order your own liquid zeolites here](#).

This liquid zeolite product is currently not a registered company in this region. It is currently applying for registration of its product with the Therapeutic Goods Administration (TGA). The TGA is the regulatory agency for medical drugs, medical devices, blood, tissues and chemicals. This product is allowed into these countries on a personal use only basis and cannot be re-sold until TGA registration is achieved.

There is a special order form here that you can use to order it directly from the company. During this time, in order for you to purchase it for your own personal use, you must sign up as a distributor for the company for a once off small fee of US\$29.95

Any violation of this policy (which states that you cannot re-sell the zeolites to people in these countries) will mean instant cancellation of your distributor agreement.

"On Oct 14, I was diagnosed with Malignant Mesothelioma lung cancer caused from Asbestos in the lung. I had it in both lungs so surgery was not an option for treatment and this type of cancer doesn't respond to Chemo or Radiation treatment. I was told I was in the 4th stage. After all testing was completed, CT scan, Lab work, Tissue biopsy, and a PET scan, I was told by the Oncologist that there was nothing he

could do for me and he referred me back to my medical doctor for the final care. On Oct 31st, I started taking a liquid form of zeolite. The second day of my taking this I started to have different sensations in the tumor on my back that was protruding through the chest wall. Sensations like a numbness, to jelly like when I walked, to bee stings and painful, to a stretching feeling at the tumor, each day it was a different feeling.

After two weeks on the liquid zeolite, a tumor in my upper abdomen which was about the size of a ping-pong ball was now the size of a marble. In the third week, that tumor could not be found and the tumor on my back was almost gone. At the time of my appointment with the Oncologist the tumor mass on my back could not be found."

Larry B. — Jemison , Alabama

"In less than 60 days on the product, I am thinking clearly and ... this is after two rounds of chemo treatments, major surgery to remove one breast, reconstructive surgery at the same time, and Herceptin treatments. I lost all of my hair like most chemo users do. The doctors all said it would all come back Well, not like it used to be! The hair on the top of my head was extremely thin even though I have always had very thick hair and the crown was extremely painful. After starting ZEOLITES, the hair on the top of my head has grown back in and my head has stopped hurting.

So many physical things are much better, but the most exciting of all is my ability to think again! I finished the second terrible round of chemo in January of this year, but the chemo fog was still there. I felt like an old woman! I couldn't make a decision; I could only do one thing at a time when I used to multi-task; I had to write everything down because I would forget it otherwise, and then I would forget to take the list with me; I was afraid to get with a customer because I had difficulty solving their problems. Since ZEOLITES, I am back doing everything and more that I was doing ten years ago.

I consider myself a chemical warfare survivor; and, by the way, a cancer survivor, too. CHEMO is awful. ZEOLITES is Wonderful."

Karen Tobias

HYPERACTIVE TEEN

"My grandson, age16, has had a behavior problem. His school teacher said, "I don't want him in my class until he is medicated." My daughter put him on Ritalin. We prayed that something natural would take the place of it.

We know God answers prayer. A few weekends ago he came to stay with me. We gave him 10 drops of a liquid zeolite on starting Friday night, at 6 PM. We started giving him 10 drops 4 times a day. He calmed right out and didn't take his Ritalin over the weekend, as it caused him to have side effects he didn't like.

He had final exams on Monday, 4 days after we started him on the liquid zeolite. My daughter, Angela, asked me, "What did you do to my son? He's in his room multi-tasking." He was fixing his room up. He picked up all his clothes, and was organizing his room. He had never done that.

His final exams were Monday. He had to ace his German exam in order to get a passing grade, as he was failing German. Angela asked me what to do. (He had been off the Ritalin all weekend and had taken the liquid zeolite instead.) I said, "Because of the differences we've seen in the 3 days we've had him, I'd send him to school without the medication, but that's your call."

He went to school without the medication. He called me in the afternoon and said, "Grammy-cat, I aced all my exams." He did. He got straight As on his report card without the medication. We know that a lot of these disorders are caused by heavy metals. He stayed off his Ritalin after just one weekend on the liquid zeolite.

Angela has not gotten one call from the teachers saying that he had forgotten to turn in the homework that he had done. Before calls from the teachers were frequent. I asked Braden to explain how his head feels. He said, "I don't have any more noises in my head. Before when I would try and concentrate, I couldn't concentrate on what I needed to do, there were so many noises. Now I can concentrate."

Kathy Reichenbach, Lake Michigan, March 2006

**Dr. Harvey Kaufman unlocks
HEALTH BREAKTHROUGH:
14 Years of Research Creates the Most Important Supplement
You May Ever Take - NCD Liquid Zeolite**

What is Zeolite?

Zeolites are a group of minerals formed when molten lava from ancient volcanoes mixed with sea water.

Zeolites have been shown to remove heavy metals, toxins and other compounds from the body; balance the body's pH levels; and support a healthy immune system.

They do this through their unique crystalline structure of cavities and "cages" that trap these substances and remove them safely and naturally from your system.

A specific member of the zeolite family of minerals, known as "clinoptilolite" has a very unique honeycomb-like cellular structure that has the ability to trap and bind with various toxins, heavy metals, viral particles and other impurities and remove them safely from your body.

When this specific form of zeolite is "activated" with a process that removes any naturally occurring toxins from it, the end product is a 100% natural, 100% non-toxic liquid that is completely safe for human consumption.

In fact, the United States Food and Drug Association (FDA) has given zeolite a G.R.A.S. rating which means Generally Recognized As Safe.

Key Points

Natural Cellular Defense is derived from a naturally-occurring mineral zeolite. Zeolites are considered 100 percent safe and non-toxic by the FDA.

Natural Cellular Defense and its constituent zeolite have been shown to have the following functions:

- Retains the natural zeolite property of reducing cancer risk.
- Acts as a potent anti-oxidant.
- May aid in balancing bodily pH levels.
- Acts to chelate and remove heavy metals from the system.
- Reduces the incidence of diarrhea.
- Improves nutrient absorption in the digestive tract.
- Acts to balance digestive pH, thus reducing acid reflux.
- Acts to stabilize immune system function (immunomodulatory).
- Acts as a broad spectrum anti-viral agent.

Introduction

Zeolites are hydrated natural and synthetic microporous crystals with well-defined structures containing AlO_4 and SiO_4 tetrahedra linked through the common oxygen atoms. Most common natural zeolites are formed by alteration of glass-rich volcanic rocks (tuff) with fresh water in playa lakes or by seawater. The structures of zeolites consist of three-dimensional frameworks of SiO_4 and AlO_4 tetrahedra. The aluminum ion is small enough to occupy the position in the center of the tetrahedron of four oxygen atoms, and the isomorphous replacement of Si^{4+} by Al^{3+} produces a negative charge in the lattice. The net negative charge is balanced by the exchangeable cation (sodium, potassium, or calcium). Zeolites have been extensively used in various industrial applications based on their properties to act as catalysts, ion exchangers, adsorbents, and detergent builders. It is also known that silicates and aluminosilicates possess biological activity, either positive or negative. Talc and silica have been used in skin care for many decades, while well defined structures and catalytic activity make aluminosilicates an attractive model system for protein and enzyme mimetics.

Recent results have also demonstrated that natural, biologically nontoxic zeolites are very effective as glucose adsorbents, and this has been suggested as a potential medication for individuals suffering from diabetes mellitus.

Natural zeolites are crystalline, hydrated aluminosilicates of alkali and alkaline earth cations, having three-dimensional structures. They are characterized by the ability to lose and gain water reversibly and to exchange constituent cations (positively-charged particles) without major change of structure. The basis of interest in the biological effects of zeolites concerns one or more of their physical and chemical properties, such as ion exchange capacity, adsorption and related molecular sieve properties.

For the purpose of this Review, only the properties of zeolites that address its effects as a supplement will be investigated. Although the mechanism of action of many of these claims is not well understood, the complex structure of the zeolite in question may provide clues to this mechanism. The zeolite acts as a 'cage' and allows the molecule to trap a variety of ions and compounds. By trapping charged particles, the zeolite can: act as an antioxidant, balance pH levels, lower incidence of heavy metal damage, improve nutrient absorption and reduce gastric reflux. The cage may also trap potential carcinogens, thereby reducing the risk of developing cancer. The anti-viral activity of zeolites may be founded in the molecule's ability to trap viral particles during assembly, thereby preventing viral assembly and proliferation.

This paper will endeavor to categorize the major claims made by Natural Cellular Defense.
